

RF manual 10th edition

Application and design manual for RF products
September 2007

Introduction

Welcome to this very special edition of the RF manual. This is our 10th issue – definitely an occasion for celebration! Over the years, the RF manual has become the leading RF application forum in the market and to celebrate our 10th edition we have launched an anniversary contest on our RF manual website: www.nxp.com/rfmanual.

New developments

This edition features some exciting new developments and products, which you can find in chapter 5 Focus applications and products. These include advances in SiGeC RF transistor and RF MMIC technologies such as the BFU725F, which meet today's demand for higher frequencies.

We have also introduced new CATV 1-GHz modules, enabling you to increase network capacity for high-end services.

In addition, we now offer WiMAX transceivers, covering frequencies from 2.3 GHz to 3.8 GHz. These allow you easily to create total WiMAX system solutions that meet TTA, FCC and ETSI requirements.

For satellite LNB, we have introduced the industry's first fully integrated silicon-based IC solution – a valuable contribution to lowering total cost of ownership of satellite solutions as a whole. This RF IC, manufactured in NXP's advanced SiGe BiCMOS process, QUBiC4G, paves the way for an exciting family of high frequency RF ICs, which will be available soon.

You will also find new BAW filters to improve reception in smart phone designs. And last but not least, we have released the first set of RF diodes in our latest UTLT package platform, enabling you to create smaller form factors.

Application driven

This manual is designed to be a dynamic source of RF information. In keeping with this, we have added some new applications that may be of interest: a satellite multi-switch box, wireless USB and RF front-ends for WiMAX applications.

Interactive

We know that many of you appreciate the RF manual's interactive features. Thus as always, this edition aims to be the interactive source for all information on our RF systems. Simply 'click' on a product type or application note and you will be taken directly to the corresponding product information page or application document on the NXP website.

Internet

You can access the manual via www.nxp.com/rfmanual or just 'google' RF manual.

Contents

1. Applications, recommended products and application notes	7
1.1 Low-cost cellular phone front-end for ODM/CEM designs	7
1.2 A 2.4 GHz front-end for WLAN, Bluetooth™, DECT, ZigBee™, etc.	9
1.3 Cordless Phone	10
1.4 Satellite outdoor unit, low noise block (LNB) for multiple users.	12
1.5 Satellite Multi Switch Box - 4 x 4 (up to 16 x 16)	13
1.6 Global Positioning System (GPS).	14
1.7 TV / VCR / DVD tuning.	15
1.8 Car radio receiver (CREST ICs: TEF6860HL, TEF6862HL).	17
1.9 RF generic front-end for applications with a single antenna: for e.g. walkie-talkie & remote metering.	18
1.10 RF generic front-end for applications with a dedicated antenna for reception and transmission: for e.g. tire pressure monitoring systems & keyless entry.	19
1.11 Digital Audio Broadcasting (DAB).	20
1.12 Wireless Microphone	21
1.13 Wireless USB	22
1.14 RF front-end for WiMAX applications	23
1.15 CATV electrical (line extenders)	24
1.16 CATV optical (optical node with multiple out-ports)	25
1.17 Optical networking (SFF/SFP modules)	26
2. Product portfolio	28
2.1 New products.	28
2.2 RF diodes	29
2.2.1 Varicap diodes.	29
2.2.2 PIN diodes	32
2.2.3 Band-switch diodes.	33
2.2.4 Schottky diodes.	34
2.3 RF Bipolar transistors.	35
2.3.1 Wideband transistors	35
2.4 RF ICs	38
2.4.1 MMICs	38
2.4.2 Satellite LNB RF ICs.	39
2.4.3 WiMAX RF ICs	39
2.5 RF MOS transistors	40
2.5.1 JFETs.	40
2.5.2 MOSFETs	42
2.6 RF Modules	44
2.6.1 CATV Reverse Hybrids	44
2.6.2 CATV Push-Pulls	44
2.6.3 CATV power doublers	45
2.6.4 CATV optical receivers	45
2.7 Fiber-optic transceiver ICs.	46
2.7.1 Laser drivers.	46
2.7.2 Transimpedance amplifiers	46

3. Design-in tools	48
3.1 S-Parameters	48
Wideband transistors, MMICs & FETs	48
3.2 Spice models	48
Wideband transistors, FETs & Varicap diodes.	48
3.3 Application notes	49
3.4 Demo boards	49
3.4.1 MMIC and SiGeC transistor demo boards.	49
3.5 Samples of products in development	50
3.6 Samples of released products	50
3.7 Datasheets	50
3.8 Design-in support	50
4. Cross-references & replacements	52
4.1 Cross-references: Manufacturer types versus NXP types.	52
4.2 Cross-references: NXP discontinued types versus NXP replacement types	57
5. Focus applications & products	59
5.1 High performance miniature BAW filters and duplexers	59
5.2 Total solution for satellite LNB.	61
5.3 NXP CATV C-family for the Chinese SARFT standard	63
5.4 Upgrade to a sustainable 1-GHz CATV network.	66
5.5 A perfect match up to 20 GHz.	68
5.6 Best-in-class LNB performance	70
5.7 Mobile applications break free with WiMAX MIMO	71
5.8 Boost RF performance and reduce system size	73
6. Packing and packaging information	76
6.1 Ultra thin leadless package platform	76
6.2 Packing quantities per package with relevant ordering code	77
6.3 Marking codes list	78
7. Contacts and web links	80

What if you could reduce RF component count in your wireless devices?

Look at RF IC's – MMICs, chapter 2.4.1

Product highlight: BGA2771 MMIC General - purpose wideband amplifier

Silicon Monolithic Microwave Integrated Circuit (MMIC) wideband amplifier with internal matching circuit in a 6-pin SOT363 SMD plastic package. The BGA27xx series amplifier provides large bandwidth and high quality in wireless system applications.

Features

- ▶ Internally matched
- ▶ Wide frequency range
- ▶ Very flat gain
- ▶ High output power
- ▶ High linearity
- ▶ Unconditionally stable

1.2 A 2.4 GHz front-end for WLAN, Bluetooth™, DECT, ZigBee™, etc.

Product highlight: BGA6289 MMIC medium power amplifier

Silicon Monolithic Microwave Integrated Circuit (MMIC) wideband medium power amplifier with internal matching circuit in a 4-pin SOT89 plastic low thermal resistance SMD package. The BGA6x89 series of medium power gain blocks provides large bandwidth and high-quality performance in 2.4GHz wireless applications.

Features

- ▶ Broadband 50W gain block
- ▶ 17dBm output power
- ▶ Single supply voltage needed

Recommended application notes

2.45 Ghz T/R, RF switch	BAP51-02
Low-impedance PIN diode	BAP50-05

Product highlight: BAP64xx PIN diode for RF switch

Operating up to 3GHz with high-voltage handling capabilities, NXP's PIN diodes are ideal for a wide range of wireless communication application. Together with outstanding RF performance, this component simplify design-in because of its extremely low forward resistance, diode capacitance and series inductance. Significant

board space saving by supplying a range of high compact package options – including SOD523, SOD323 and leadless SOD882T.

Features

- ▶ Operate up to 3GHz
- ▶ High isolation, low distortion, low insertion loss
- ▶ Low forward resistance (Rd) and diode capacitance (Cd)
- ▶ Ultra-small package options

Product highlight: BFG425W NPN wideband transistor

NXP NPN double polysilicon wideband transistor with buried layer is for low voltage and low noise applications in a plastic, 4-pin dual-emitter SOT343R package.

Features

- ▶ Very high maximum power gain (20dB for 2GHz)
- ▶ Low noise figure (1.2dB for 2GHz)
- ▶ High transition frequency (25GHz)
- ▶ Emitter is thermal lead
- ▶ Low feedback capacitance (95fF)

1.4 Satellite outdoor unit, low noise block (LNB) for multiple users.

Product highlight: BFG424F bipolar oscillator

The BFG424F is an NPN double polysilicon wideband transistor with a buried layer for low-voltage applications. Housed in an easy-to-use SOT343F package, it features very high gain, stable phase noise & low feedback capacitance.

Features

- ▶ Stable phase noise over temperature performance
- ▶ Compact flat-lead SOT343F package simplifies assembly
- ▶ Free oscillations at all LO frequencies

Product highlight: BFU725F SiGeC microwave NPN transistor

Meet the trend towards higher frequencies. The BFU725F provides high switching frequencies plus extreme high gain and low noise.

Features

- ▶ Very low noise (0.4 dB at 1.8 GHz / 0.67 dB at 5.8 GHz)
- ▶ High maximum stable gain (27.8 dB at 1.8 GHz / 10 dB at 18 GHz)

- ▶ High switching frequency (fT >100 GHz / fMAX >150 GHz)
- ▶ Plastic surface-mount SOT343F package

Benefits

- ▶ SiGeC process delivers high switching frequency from a silicon-based device
- ▶ Cost-effective alternative to GaAs devices
- ▶ RoHS compliant

--	----------------------

* No web link available, published in Appendix 3rd edition, see RF Manual web page.

Product highlight: BF1206F dual gate mosfet double amplifier specified for low power applications.

The device consists of two dual gate mosfet amplifiers in a small SOT666 flatlead package. The BF1206F is a true low power device specified for low voltage and low currents, intended for use in mobile applications where power consumption is critical. Performance is suitable for application at supply voltages of 3Volts and draincurrents of 4mA.

Features

- ▶ Low power specified
- ▶ Two amplifiers in one small SOT666 package
- ▶ Shared gate 2 and Source leads
- ▶ Each amplifier is biased by an external bias resistor
- ▶ Excellent noise and crossmodulation performance

What if you could create a smaller form factor?

Product highlight: BF862 Junction Field Effect Transistor

Our Tuning component portfolio contains excellent products for car radio reception applications, playing a vital role for in-vehicle media platforms. The NXP devices for this application ensure excellent reception quality and ease of design in. Performance is demonstrated in reference designs.

High performance Junction Fet BF862, specially designed for car radio AM amplifiers.

Features

- ▶ High transition frequency and optimized input capacitance for excellent sensitivity
- ▶ High transfer admittance resulting in high gain
- ▶ Encapsulated in the versatile and easy to use SOT23 package

1.9 RF generic front-end for applications with a single antenna: for e.g. walkie-talkie & remote metering

Product highlight: PRF957 silicon NPN UHF wideband transistor

Silicon NPN UHF wideband transistor in a surface mount 3-pin SOT323 package is primarily intended for wideband applications in the RF front end. The transistor is widely built as LNA, power amplifier, driver and buffer in the UHF band application.

Features

- ▶ Small 3-pin plastic surface mounted package
- ▶ Low noise (1.3dB at 1GHz) and high power gain (15dB at 1GHz)
- ▶ Gold metallization ensures excellent reliability

1.10 RF generic front-end for applications with a dedicated antenna for reception and transmission: for e.g. tire pressure monitoring systems & keyless entry

Product highlight: NXP varicap diodes for VCO

Varicap diodes are principally used as voltage varicap capacitors with their diode function a secondary option. These devices are ideal for voltage controlled oscillators (VCO) in ISM band applications.

Features

- ▶ Excellent linearity
- ▶ Excellent matching
- ▶ Very low series resistance
- ▶ High capacitance ratio

Suitable frequencies for DAB identified on VHF band, L-band and S-band:

- VHF band I: 47 - 68 MHz
- VHF band III: 174 - 240 MHz
- L-band: 1452 - 1467.5 MHz
- S-band: 2310 - 2360 MHz

Product highlight: BFG410W NPN wideband transistor

NXP NPN double polysilicon wideband transistor with buried layer is for low voltage and low noise applications in a plastic, 4-pin dual-emitter SOT343R package.

Features

- ▶ Very high power gain (18dB at 2GHz)
- ▶ Low noise figure (1.2dB at 2GHz)
- ▶ High transition frequency (22GHz)
- ▶ Emitter is thermal lead
- ▶ Low feedback capacitance (45fF)

Product highlight: BFU725F SiGeC microwave NPN transistor

Meet the trend towards higher frequencies. The BFU725F provides high switching frequencies plus extreme high gain and low noise.

Features

- ▶ Very low noise (0.4 dB at 1.8 GHz / 0.67 dB at 5.8 GHz)
- ▶ High maximum stable gain (27.8 dB at 1.8 GHz / 10 dB at 18 GHz)

- ▶ High switching frequency (fT >100 GHz / fMAX >150 GHz)
- ▶ Plastic surface-mount SOT343F package

Benefits

- ▶ SiGeC process delivers high switching frequency from a silicon-based device
- ▶ Cost-effective alternative to GaAs devices
- ▶ RoHS compliant

1.14 RF front-end for WiMAX applications

Application diagram

	1 Rx/1 Tx	3.3 - 3.8	SOT619	UXA23470

Product highlight: UXx234xx

Covering frequencies from 2.3 GHz to 3.8 GHz, these fully integrated, low-power, direct conversion transceivers easily allow total WiMAX system solutions to meet TTA, FCC and ETSI requirements. With dual receiver/transmitter configurations available they can also deliver better uplink performance and improve your total end-user system. In addition, low power requirements ensure longer battery life.

Features

- ▶ Fully integrated direct up transmitter and ZIF receiver architecture
- ▶ Dual Rx and Tx for MIMO operation
- ▶ Low noise, high dynamic range receiver with high linearity
- ▶ Fully integrated VCO with integrated supply voltage regulator
- ▶ Serial bus digital interface (4 wires)

Recommended application notes

BGS67A high-dynamic-range hybrid ampl. reverse ampl. 2-way CATV systems	BGS67A
A hybrid wideband amplifier module for digital CATV networks with BGD902	BGD902

Product highlight:
CGD1044H

CGD1044H with high-output power is primarily designed for use in fiber deep-optical-node applications (N+0/1/2). This 1GHz solution offers an extended temperature range, high power overstress capabilities and high ESD levels resulting in a low cost of ownership. It's designed for durability and offering superior ruggedness.

Features

- ▶ High-output power
- ▶ Excellent linearity, stability, and reliability
- ▶ High power gain
- ▶ Extremely low noise
- ▶ Silicon Nitride passivity
- ▶ GaAs HFET dies for high-end applications

Recommended application notes

Using a Philips optical receiver in CATV applications	All optical receivers
---	-----------------------

Product highlight: BGO807C

BGO807C is an integrated optical receiver module that provides high output levels and includes an integrated temperature compensated circuitry. In your optical node design, BGO807C enables a high performance/ price ratio and ruggedness. When upgrading an HFC network from analog to digital our BGO807C is the perfect fit.

Features

- ▶ Excellent linearity
- ▶ Low noise
- ▶ Excellent flatness
- ▶ Standard CATV outline
- ▶ Rugged construction
- ▶ Gold metallization ensures excellent reliability
- ▶ High optical input power range

Product highlight TZA3046

TZA3046 transimpedance preamplifier brings high receiver sensitivity, wide dynamic range, and low power dissipation to Receiver Optical Sub Assemblies (ROSA). TZA3046 is optimized for Fibre Channel transmission systems and is equipped with a SFF8472-compliant output of average photo current for RSSI monitoring. A clear bonding layout and identical ports on both side of the die make assembly easy.

Features

- ▶ High receiver sensitivity, low equivalent input noise
- ▶ Exceptionally wide bandwidth
- ▶ On-chip AGC with options for external control
- ▶ Input overload up to 1.5 mA pp
- ▶ Differential outputs
- ▶ Bias voltage for PIN diode
- ▶ Single 3.3-V supply voltage (range: 2.9 to 3.6 V)

**What if you could get a cost effective
RF transistor up to 20 GHz?**

Look at BFU725F, chapter 5.5

BAP65LX	Cellular phone, Bluetooth, Cordless phone -RF switch & FE module in 1006 leadless package	RFS	Released
BAP1321LX	Cellular phone, Bluetooth, Cordless phone -RF switch & FE module in 1006 leadless package	RFS	Released
NEW: RF MOS transistors			
BF1208D	Twin MOSFET with two LNAs for TV/VCR/DVD/STB/SAT with internal switching circuit	RFS	Released
BF1214	Twin MOSFET with two identical VHF-optimized LNA's	RFS	Released
NEW: RF IC, Biasing ASIC and pHEMT GaAs transistors			
BGA2714	Silicon Gain Block MMIC for Satellite LNB	RFS	Released
UAF3000TS	Biasing ASICs for Satellite LNB	RFS	Released
UAF4000TS	Biasing ASICs for Satellite LNB	RFS	Released
TFF1000HN	Fully integrated Downconverter for Satellite LNB compliant with European and Asian standards	RFS	Released
TFF1004HN	Fully integrated Downconverter for Satellite LNB compliant with European and Asian standards	RFS	Released
NEW: RF IC WiMAX			
UXA23465	RF WiMAX transceiver 2 Rx/1 Tx	RFS	Released
UXA23466	RF WiMAX transceiver 2 Rx/2 Tx	RFS	Released
UXA23475	RF WiMAX transceiver 2 Rx/1 Tx	RFS	Released
UXA23476	RF WiMAX transceiver 2 Rx/2 Tx	RFS	Released
UXF23480	RF WiMAX transceiver 1 Rx/1 Tx	RFS	Released
UXF23460	RF WiMAX transceiver 1 Rx/1 Tx	RFS	Released
UXA23470	RF WiMAX transceiver 1 Rx/1 Tx	RFS	Released
NEW: SiGeC transistors & MMICs			
BFU725F	SiGeC transistor for high frequency applications: e.g.: DECT, GPS, Wireless LAN, Satellite Radio (DAB)	RFS	Released
BFU705F	SiGeC transistor for high frequency applications: e.g.: LNB 2nd stage (12 GHz)	DEV	Q1 2008
BGU7003	MMIC for high frequency applications	DEV	Q1 2008
BFU780F	SiGeC transistor for high frequency applications with high linearity performance	DEV	Q1 2008
NEW: RF CATV modules			
CGD1042	1000 MHz, 22 dB gain Power Doubler, GaAs HFET SOT115	RFS	Released
CGD1044	1000 MHz, 25 dB gain Power Doubler, GaAs HFET SOT115	RFS	Released
CGD1042H	1000 MHz, 22 dB gain Power Doubler, GaAs HFET SOT115 High output	RFS	Released
CGD1044H	1000 MHz, 25 dB gain Power Doubler, GaAs HFET SOT115 High output	RFS	Released
CGY888C	870 MHz, 35 dB gain Push Pull, GaAs HFET SOT115	RFS	Released

2.2 RF diodes

NXP varicaps:

<http://www.nxp.com/varicaps>

NXP RF PIN diodes:

<http://www.nxp.com/pindiodes>

NXP RF Schottky diodes:

<http://www.nxp.com/rfschottkydiodes>

2.2.1 Varicap diodes

Why choose NXP semiconductors' varicap diodes:

- Reference designs for TV and radio tuning
- Direct matching process
- Small tolerances
- Short leadtimes
- Complete portfolio covering broad frequency range and variety in package (including leadless)
- Reliable volume supply

Varicap diodes line-up per frequency

Many varicap diodes are or will be available in our new UTLP leadless package, look at our varicap portfolio in this chapter. Also more information on UTLP leadless packaging in Chapter X "Packing and Packaging".

2.2.2 PIN diodes

Why choose NXP Semiconductors' PIN diodes:

- Broad portfolio
- Unrivalled performance
- Short leadtimes
- Low series inductance
- Low insertion loss
- Low capacitance

2.2.3 Band-switch diodes

Why choose NXP Semiconductors' bandswitch diodes:

- Reliable volume supplier
- Short leadtimes
- Low series Inductance
- Low Insertion loss
- Low capacitance
- High reverse Isolation

Type	Package	MAXIMUM RATINGS		CHARACTERISTICS ; maximals					
		VR(V)	IF(mA)	Rd @ IF and f			Cd @VR and f

Bold = Highly recommended product

2.2.4 Schottky diodes

Why choose NXP Semiconductors' schottky diodes:

- (Very) low diode capacitance
- (Very) low forward voltage
- Single and triple-isolated diode
- (Ultra / very) small package

Applications

- Digital applications:
 - ultra high-speed switching
 - clamping circuits
- RF applications:
 - diode ring mixer
 - RF detector
 - RF voltage doubler

Low-capacitance Schottky diodes

Type	Package	VR max. (V)	IF max. (mA)	VF max. (mV)	CD max. (pF)

2.3 RF Bipolar transistors

2.3.1 Wideband transistors

RF wideband transistors:

<http://www.nxp.com/rftransistors>

Why choose NXP Semiconductors' wideband transistors:

- Broad portfolio (1st - 7th generation)
- Short leadtimes
- Smallest packages
- Volume delivery

Wideband transistors

The f_T - I_C curve represents Transition Frequency (f_T) characteristics as a function of collector current (I_C) for the six generations of RF wideband transistors. A group of transistors having the same collector current (I_C) & similar transition frequencies (f_T) represents a curve. The curve number matches products in the table, detailing their RF characteristics.

Wideband transistors line-up per frequency

Wideband transistors (RF small signal)

What if you could improve the reception of your smart phone?

Look at BAW filters and duplexers, chapter 5.1

2.4 RF ICs

2.4.1 MMICs

NXP RF MMICs:

<http://www.nxp.com/mmics>

Why choose NXP Semiconductors' MMICs:

- Reduced RF component count
- Easy circuit design-in
- Reduced board size
- Short time-to-market
- Broad portfolio
- Volume delivery
- Short leadtimes

General-purpose wideband amplifiers (50 Ohm gain blocks)

Type	Package	@		Fu ⁽¹⁾	@ 1GHz					Gain ⁽³⁾ (dB) @				Limits

2.4.2 Satellite LNB RF ICs

Why choose NXP Semiconductors' RF ICs:

- Lowest total cost of ownership
- Alignment free concept
- Easy circuit design-in
- Improved LO stability

Satellite LNB Downconverter ICs

	Package	Input frequency range	Conversion gain	Noise figure	Output IP3	Switched LO frequency
		(GHz)	G _c (dB)	NF (dB)	IP3(out) (dB)	(GHz)
TFF1000HN	SOT616	10.7 to 12.75	42	9	10	9.75 / 10.6
TFF1004HN	SOT616	10.7 to 12.75	32	9	10	9.75 / 10.6

Satellite LNB Biasing ICs

	Package	Supply voltage	Drain voltage	Drain current	Supply current	Polarisation detection voltage
		V _{CC} (V)	V _D (V)	I _{DO} (mA)	I _{CC} (mA)	VPOL (V)
UAF3000TS	SOT360	3.3 or 5	2	10	6	14.75
UAF4000TS	SOT403	3.3 or 5	2.2	10	6	-

2.4.3 WiMAX RF ICs

Why choose NXP Semiconductors' RF WiMAX transceivers:

- Extremely low noise figure
- Support for flexible calibration techniques ensures optimum performance and lowest power
- Field proven solution
- No external IF filter required
- Minimal external component requirement

RF WiMAX transceivers

	Frequency range (GHz)	Type	NF (dB)	Rx gain (max)	ICC (mA) RX/TX	Tx gain range (dB)	Linear output power meeting spectrum mask (dBm)	Package size HVQFN48 (mm)

2.6 RF Modules

NXP RF CATV-HFC modules:

<http://www.nxp.com/catv>

Why choose NXP Semiconductors' RF Modules:

- Excellent linearity, stability and reliability
- Rugged construction
- Extremely low noise
- High power gain
- Low total cost of ownership

CATV types for Chinese (C-types) and Indian market (OM-types)

New in our CATV Hybrid portfolio are two families of products.

The C types are specially designed for the Chinese market, fitting two major governmental projects. And the OM types, also called the INDI types, are designed for low-end CATV

infrastructure networks deployed in India. Both families will be extended in the following months to cover most of those two specific market segments.

C types (China)

- CATV push pulls, chapter 2.6.2 :
BGY588C and BGE788C
- CATV power doublers, chapter 2.6.3 :
BGD712C
- CATV optical receivers, chapter 2.6.4 :
BGO807C

OM types (India)

- CATV push pulls, chapter 2.6.2 :
OM7650 and OM7670

2.6.1 CATV Reverse Hybrids

Bold = Highly recommended product

* NOTES: This table is for reference only.

For full data please refer to the latest datasheet.

For availability please check the NXP Sales office.

Description

Frequency range: minimum and maximum frequency in MHz at which data are characterized @Ch/@Vo. The number of channels and the output voltage at which CTB, XM, CSO and d2 are characterized @fm. Measurement frequency is F. Noise Figure is in dB or Noise in pA/Sqrt(Hz). FL is Flatness Rmin is Minimum responsivity of optical receivers.

2.7 Fiber-optic transceiver ICs

NXP Optical Networking

<http://www.nxp.com/opticalnetworking>

Why choose NXP Semiconductors' Fiber Optic Transceivers:

- Reliable supplier
- Easy to design in
- Robust products

2.7.1 Laser drivers

Part number	Data-rate	Package type	Bare die	I _{mod} /I _{Bias}	Dual loop	Input	V _{cc}	Power dissipation
		Mb/s		[mA]				mW
TZA3047A	30-1250	SOT560-1	X	100-100	X	CML/PECL	3.3	420
TZA3047B	30-1250	SOT560-1	X	100-100	X	CML/PECL	3.3 ¹⁾	420
TZA3050	30-1250	SOT560-1	X	100-100	-	CML/PECL	3.3 ¹⁾	420

2.7.2 Transimpedance amplifiers

Part number	Data-rate	Package type	Bare die	In	Eq Sens	RSSI	Output	V _{cc}	Power dissipation
		Mb/s		[nA]	[dBm]				mW
TZA3036	0-155	die only	X	10	-40	Yes	50 Ohm	3.3	50
TZA3026	0-622	die only	X	67	-32	Yes	50 Ohm	3.3	60
TZA3046	0-1250	die only	X	130	-29	Yes	50 Ohm	3.3	70
TZA3013	0-2488	die only	X	450	-24	-	50 Ohm	3.3	86

Bold = highly recommended product

*) NOTES: All figures given are typical at 25 deg C

Power dissipation is given for V_{cc} = 3.3 V

Eq. sensitivity conditions: Calculated from noise figure using a lowpass bandwidth filter at 0.7x bit rate and a source with an extinction ratio of 10% and a photodiode responsivity of 0.9A/W.

3.3¹⁾ means that the output stage is capable of driving 5 V laser applications.

What if you could lower total cost of ownership for your satellite solutions?

Look at TFF1004HN for satellite LNB, chapter 5.2

3. Design-in tools

This chapter will make it easier to find and get hold of design-in information and materials, with web links or references to the NXP representative / authorized distributor.

3.1 S-Parameters

S-Parameters help you to simulate the behaviour of our devices to your specific adjustments for e.g. voltage, current.

Wideband transistors, FETs & MMICs

First, click on the type number, which takes you directly to the corresponding product information page on the NXP Semiconductors internet.

Second, scroll down on this product information page to find the S-Parameters.

3.2 Spice models

Spice models help you to create the optimal performance and to understand which external components have a certain influence on that performance.

Wideband transistors, FETs & Varicaps diodes

First, click on the type number which takes you directly to the corresponding product information page on the NXP Semiconductors internet.

Second, scroll down on this product information page to find the Spice models.

3.3 Application notes

http://www.nxp.com/products/all_appnotes/
For the application notes we refer you to chapter 1 of this manual. For each application, we have given the recommended application notes which are available on the internet (with interactive link) or via your local NXP representative or authorized distributor (look at the last chapter: Web Links and Contacts).

3.4 Demo boards

3.4.1 MMIC and SiGeC transistor demo boards

MMIC demo boards are available (although limited) via your local NXP representative or authorized distributor (look at the last chapter: Web Links and Contacts).

BGA2012	BGA2715	BGA6489	
BGA2031	BGA2716	BGA6589	

3.5 Samples of products in development

For development samples, please ask your local NXP representative or authorized distributor (see last chapter: Web Links and Contacts) to order the latest versions at the RF development team.

3.6 Samples of released products

For all released products, samples are available in the sample warehouse. Look on the home page of the NXP web site for the link to the online sample store: www.nxp.com

3.7 Datasheets

For all released products, datasheets are available on the NXP Semiconductors internet. Simply 'clicking' on a product type (in this manual chapter 1 or 2) takes you to the corresponding product information page on the NXP Semiconductors website.

3.8 Design-in support

If you need special design-in support from our design-in engineers, please ask your local NXP representative or authorized distributor (see last chapter: Web Links and Contacts), to pass on your request to the RF development team.

What if you could increase your network capacity for high-end services?

Look at 1-GHz CATV, chapter 5.4

4. Cross-references & replacements

5. Focus applications & products

5.1 High performance miniature BAW filters and duplexers

Bulk Acoustic Wave (BAW) filters and duplexers for Front-End Modules and Cellular Phones

Bulk Acoustic Wave filters provide high performance, ultra small size solutions for next generation integrated cellular phones. Together with NXP Waferlevel Package this allows for seamless integration of BAW filters into RF front-end modules.

The NXP series of high-performance Bulk Acoustic Wave (BAW) filters and duplexers is optimized for (W-)CDMA/GSM cellular phones. Available in NXP-patented Wafer Level Chip Scale Packaging (WL-CSP), they provide superior performance in an ultra-small size.

Compared to Surface Acoustic Wave (SAW) filters, BAW typically offers superior power handling, enhanced ESD robustness, smaller size, reduced in-band insertion loss and increased steepness of the filter skirts in lower and upper transition bands. BAW filters also offer less center frequency drift versus temperature change and are more suitable for applications at frequencies ranging from 1 to 20 GHz.

Features

- High performance BAW filters and duplexers
 - Low insertion loss
 - High stopband rejections/isolations
 - Low temperature drift
 - Superior power handling
 - Enhanced ESD robustness
- Ultra-small, NXP-Waferlevel Package
 - Ultra-small footprint (as small as 1.5mm²)
 - Very low profile (height < 450 µm after solder reflow)

Benefits

- Optimized for:
 - UMTS interstage filter (band II)
 - UMTS Duplexer (band I, II, III, VII)
 - Satellite radio, Bluetooth
- Easy package-less chip scale integration into RF front-end module
- In house EM simulation to support FEM design in
- Reduced PCB implementation size
- Ideal for high frequency applications
- Superior performance in very small size

High-performance BAW filters & Duplexers

Designed for easy integration into front-end modules, they deliver low insertion loss and high selectivity. NXP BAW filters and duplexers support receive (Rx) and transmit (Tx) applications in (W-)CDMA and other wireless applications higher than 1.5 GHz :

- US PCS (1900 MHz)
 - BWT190(A) high-rejection Tx interstage filter
 - BWD190(A) duplexer
- UMTS (2100MHz)
 - BWD210(A) BAW duplexer
- Satellite filter (2300 MHz)
 - BWR230(A) antenna filter

NXP Semiconductors BAW devices

Type	Description	Freq. (MHz)	Size chip scale (mm ²)	Molded
BWT190(A)	PCS Tx interstage filter	1900	1.4 x 0.7	2.0 x 1.6
BWD190(A)	PCS duplexer	1900	Tx: 1.3 x 0.9 Rx: 1.4 x 0.9	3 x 2.5
BWD210(A)	UMTS duplexer	2100	Tx: 1.3 x 0.9 Rx: 1.4 x 0.9	3 x 2.5
BWR230(A)	Satellite filter	2300	n.a.	1.6 x 1.0

Electrical characteristics of the BWD190A, Tj = 25°C,Z0 = 50Ω

Parameter	Band	Frequency (MHz)	Min (dB)	Max (dB)
Insertion Loss	Tx	1850 – 1910	-	2.8
	Rx	1930 – 1990	-	3.0
Ripple	Tx		-	0.5
Rejection			-	-
Tx to Antenna	Rx		41	-
Rx to Antenna	Tx		50	-
Return Loss	Tx		12	-
	Rx		12	-
	Antenna		12	-
Isolation (Tx – Rx)	Tx		53	-
	Rx		45	-

Passband characteristics of duplexer BWD190A

5.2 Total solution for satellite LNB

Create a Ku-band DVB-S LNB for less, with higher reliability

NXP fully integrated down converter (PLL synthesizer/mixer/amplifier) TFF1004HN for satellite LNB

The TFF1004HN is an integrated downconverter for use in Low Noise Block (LNB) converters in a 10.7 GHz to 12.75 GHz Ku band satellite receiver system. This alignment-free concept replaces current solutions that require components such as GaAs mixer and DRO. As part of our LNB chipset, it enables a Ku-band satellite receiver that lowers total cost of ownership and guarantees the stability of the local oscillator.

Features

- 4 Pre-amplifier, mixer, buffer amplifier, and PLL synthesizer in one IC
- State-of-the-art SiGe BiCMOS process
- Alignment-free concept
- LO frequency with XTAL control
- Low phase noise
- Switched LO frequency: 9.75 and 10.6 GHz
- Low spurious
- HVQFN24 package (4 x 4 x 0.85 mm)
- Part of complete LNB chipset:
 - NXP UAF3000TS for supply and band/polarization switching
 - NXP BFU725F for 2nd LNA stage
- Demo board available

Application

- 4 Ku-band DVB-S receiver

Designed for use in the Low Noise Block (LNB) of a Ku-band satellite receiver for Asian and European standards, the NXP

TFF1004HN is a highly integrated IC that includes an LNA, a mixer, a down-converter, a PLL, a crystal oscillator, and an IF buffer.

It is manufactured in NXP's breakthrough SiGe BiCMOS process for microwave applications, which is more cost-effective than GaAs processes and more reliable than discrete implementations.

To comply with Asian and European DVB-S standards, the TFF1004HN supports RF input frequencies between 10.7 and 12.75 GHz, and uses a selectable LO that operates at 9.75 or 10.6 GHz.

It is housed in a small HVQFN24 package that measures only 4 x 4 x 0.85 mm, and is designed to work as part of a complete chipset that provides a total LNB solution.

Complete LNB chipset

The chipset consists of the TFF1004HN, the UAF3000TS, and the BFU725F. The UAF3000TS is a FET bias controller with a polarization switch and tone detection. It provides biasing for up to three LNA devices. An integrated bandgap reference ensures the accuracy of voltage and tone detection, also over temperature. For horizontal and vertical switching, there is an integrated supply-voltage detector, and for switching between high and low bands, there is a 22-kHz tone detector. The supply voltage range, 3.3 V or 5 V, is detected automatically.

The BFU725F is an NPN microwave transistor for high-speed, low-noise applications. In the LNB chipset, it is used for the second LNA stage. It is manufactured in a 110-GHz fT-SiGeC technology, so it delivers an excellent noise figure (1.0 dB at 12 GHz), and a high maximum stable gain (13 dB at 12 GHz).

LNB application with TFF1004HN, UAF3000TS, and BFU725F

TFF1004HN demo board

	Input frequency range (GHz)	Conversion gain Gc (dB)	Noise figure NF (dB)	Output IP3 IP3(out) (dB)	Switched LO frequency (GHz)
TFF1004HN	10.7 to 12.75	32	9	10	9.75 / 10.6
	Typ. collector current IC(max) (mA)	Transition frequency fT (GHz)	Noise figure NF (dB) @ 12 GHz	Max. stable power gain MSG/GP(max) (dB) @ 12 GHz	Collector-emitter breakdown voltage BVCEO (V)
BFU725F	8	68	1.0	13	3.2
	Supply voltage VCC (V)	Drain voltage VD (V)	Drain current IDO (mA)	Supply current ICC (mA)	Polarization detection voltage VPOL (V)
UAF3000TS	3.3 or 5	2	10	6	14.75

5.3 NXP CATV C-family for the Chinese SARFT standard

Connecting people, protecting your network

Specially designed for the Chinese Hybrid Fiber Coax (HFC) infrastructure, NXP CATV C-family offers you a total solution for cable TV networks. It is both flexible enough for connecting rural communities as part of China's 'Connecting every village' program and powerful enough for upgrading major cities from analog to high-end digital services. All C-type devices are compliant with the Chinese State Administration for Radio, Film and Television (SARFT) standard, and cover most HFC applications in the 550 - 870 MHz range.

Products

- BGY588C, BGE788C and CGY888C push-pull amplifiers
- BGD712C, CGD944C and CGD942C power doublers
- BGO807C optical receiver

Features

- Excellent linearity, stability and reliability
- High power gain
- Extremely low noise
- Silicon Nitride passivity
- GaAs HFET dies for high end devices

Benefits

- Compliant with Chinese SARFT HFC networks standard
- Transparent cap allows confirmation of product authenticity
- Rugged construction

Further extending our high quality CATV portfolio, this new family lets you address an even wider range of HFC applications. Dedicated solutions for the implementation of CATV systems in China, our C-type devices deliver the performance you need for modern TV infrastructures.

The BGY588C, BGE788C and BGD712C devices cover the frequency range from 550 MHz to 750 MHz. Extending the C-family portfolio into the high-end segment, the CGD944C, CGD942C, CGY888C and BGO807C operate between 40 MHz and 870 MHz and have been specifically tested under Chinese raster conditions. Manufactured using our GaAs HFET die process, the CGD942C, and CGD944C are high-gain, high-performance 870 MHz power doublers. They are capable of satisfying the demanding requirements of top-end applications including high-power optical nodes.

Our GaAs HFET MMIC dies are providing 'by design' the best ESD protection levels with no needs for external TVS components normally used with GaAs pHEMT devices.

All CATV C-type devices feature a see-through cap that makes it easy to distinguish them from counterfeit products.

BGY588C and BGE788C

The last stage of an HFC network structure is called a terminating amplifier or 'user amplifier' as it is close to the subscribers. Each terminating amplifier requires a single module such as BGY588C for 550 MHz, BGE788C for 750 MHz and CGY888C for 860 MHz systems. These modules are fitting perfectly in the Chinese 'Connecting to Every Village' projects.

BGD712C

The BGD712C is a 750 MHz, 18 dB power doubler module. It has been designed for 750 MHz optical nodes including ordinary or optical receivers and distribution amplifiers. It can also be used in line extender amplifiers together with a 750 MHz push-pull module, such as BGY785A or BGY787. As such it can be used widely in Chinese 'Connecting to Every Village' projects.

CGD944C and CGD942C

Our full GaAs power doublers modules, CGD942C and CGD944C offer high output power and better CTB and CSO than other modules. Designed for high-end HFC networks containing optical nodes with multiple out-ports, these modules enable each port to directly cover at least 125 subscribers. These two devices are ideal when used in upgrading HFC networks to 860 MHz.

BGO807C

BGO807C is an integrated optical receiver module that provides high output levels and includes an integrated temperature compensated circuitry. In your optical node design, BGO807C enables a high performance/ price ratio and ruggedness. When upgrading an HFC network from analog to digital our BGO807C is the perfect fit.

5.4 Upgrade to a sustainable 1-GHz CATV network

NXP high-gain power doublers CGD104x for 1-GHz CATV applications

These high-performance GaAs devices for 1-GHz CATV applications make it easy for cable operators to extend their services to include HDTV, VoIP, and digital simulcasting.

Designed for 1-GHz “sustainable networks”, these high-performance GaAs devices enable extended bandwidth and higher data rates. They deliver increased network capacity and make way for high-end services like HDTV, VoIP, and digital simulcasting.

The power doublers CGD1042 and CGD1044 are ideal for use in line extenders and trunk amplifiers. Their high-output counterparts, the CGD1042H and CGD1044H, are designed for use in fiber deep-optical-node applications (N+O/1/2), delivering the highest output power on the market today.

Products

- Power doublers: CGD1042, CGD1044
- High-output power doublers: CGD1042H, CGD1044H

Features

- Excellent linearity, stability, and reliability
- High power gain
- Extremely low noise
- Silicon Nitride passivity
- GaAs HFET dies for high-end applications
- Rugged construction

Benefits

- Simple upgrade to 1-GHz capable networks
- Optimized heat management
- Excellent temperature resistance
- Low total cost of ownership
- High ESD levels
- High power-stress capability
- Highly automated assembly

Applications

- Hybrid Fiber Coax (HFC) applications
- Line extenders
- Trunk amplifiers
- Fiber deep-optical-node (N+O/1/2)

The GaAs HFET die process delivers high gain and high performance, along with lower current and better CTB and CSO ratings.

These 1-GHz solutions are designed for durability and offer superior ruggedness, an extended temperature range, high-power overstress capabilities, and high ESD levels. The result is low cost of ownership.

The GaAs die is inserted in a unique HVQFN package that is then mounted on thermal vias that manage heat transfer to the heat sink. Temperature-control circuitry keeps the module’s high performance stable over a wide range of temperature changes.

Assembly is fully automated and requires almost no human intervention and therefore repeatability remains very high.

Upcoming push-pull products

New push-pulls, currently under development, will combine with the power doublers to service almost all modern HFC applications. The push-pull CGY1041 will deliver a gain of 21 dB, the CGY1043 a gain of 23 dB and the CGY1047 a gain of 27dB.

5.5 A perfect match up to 20 GHz

SiGeC microwave NPN transistor BFU725F

Meet the trend towards higher frequencies. With NXP Semiconductors' latest SiGeC microwave NPN transistor BFU725F, you get high switching frequencies plus extremely high gain and low noise. All this in an easy-to-use SOT343F package. It's the ideal solution for applications up to 20 GHz.

Features

- Very low noise (0.4 dB at 1.8 GHz / 0.67 dB at 5.8 GHz)
- High maximum stable gain (27.8 dB at 1.8 GHz / 10 dB at 18 GHz)
- High switching frequency ($f_T > 100$ GHz / $f_{MAX} > 150$ GHz)
- Plastic surface-mount SOT343F package

Benefits

- SiGeC process delivers high switching frequency from a silicon-based device
- Cost-effective alternative to GaAs devices
- RoHS compliant

Applications

- GPS systems
- DECT phones
- Low noise amplifier (LNA) for microwave communications systems
- 2nd stage LNA and mixer in direct broadcast satellite (DBS) low-noise blocks (LNBs)
- Satellite radio
- WLAN and CDMA applications
- Low-noise microwave applications

The NPN microwave transistor BFU725F delivers an unbeatable blend of high switching frequency, high gain and very low noise. Thanks to its ultra-low noise figure, it's perfect for your sensitive RF receivers particularly those for high-performance cell phones. Alternatively, with its high cut-off frequency, it's your ideal solution for microwave applications in the 10 GHz to 30 GHz range, such as satellite TV receivers and automotive collision avoidance radar.

The BFU725F gets its outstanding performance from our innovative silicon-germanium-carbon (SiGeC) BiCMOS process. QUBiC4X was designed specifically to meet the needs of real-life, high-frequency applications and delivers an unrivalled fusion of high power gain and excellent dynamic range. It combines the performance of gallium-arsenide (GaAs) technologies with the reliability of a silicon-based process. In addition, with the BFU725F, you don't need a biasing IC or negative biasing voltage. So it's a much more cost-effective solution than GaAs pHEMT devices.

Quick reference data

Parameter	Symbol	Conditions	Value
Collector-emitter breakdown voltage	BV_{CEO}	$I_C = 1\text{ mA}; I_B = 0$	3.2 V
Maximum collector current	$I_{C(max)}$		40 mA

5.6 Best-in-class LNB performance

MMIC wideband amplifier BGA2714

Improve the performance of your LNB design with our MMIC wideband amplifier BGA2714. It delivers best-in-class performance at very low current, is small and needs very few external components. In short, it's the ideal 1st stage IF amplifier for LNBs and other low-noise wideband applications.

A demoboard is available to help further simplify your design-in process

Features

- Extremely flat gain curve ($21\text{ dB} \pm 1\text{ dB}$ up to 2.5 GHz)
- Wide frequency range (up to 2.7 GHz @ 3 dB gain bandwidth)
- Internally matched to 50 Ω
- Very low current (4.6 mA @ 3 V)
- Low supply voltage (3 V)
- Good linearity (2.1 dBm @ 1 GHz)
- Low noise (2.2 dB @ 1 GHz)
- Excellent reverse isolation ($> 50\text{ dB}$ up to 2 GHz)

Power gain as function of frequency; typical values

- Unconditionally stable
- Very few external components required
- Compact SOT363 package

Applications

- LNB IF amplifier
- General-purpose low-noise wideband amplifier for frequencies up to 2.7 GHz

Our MMIC wideband amplifier BGA2714 is designed to meet the specific needs of LNB designs. It operates from a conveniently low supply voltage with a low supply current.

In addition, it delivers industry-leading performance with a wide frequency range, high and flat power gain and low noise. Supplied in a compact, industry-standard SOT363 package, it simplifies system integration.

MMICs like NXP Semiconductors' BGA2714 are smart RF solutions that automatically compensate for temperature and process variations. They integrate transistors, resistors and capacitors into a single device, reducing component count and simplify design. In fact, with the BGA2714 you need just two coupling capacitors and an RF decoupling capacitor.

Application as IF amplifier

Quick reference data

Symbol	Parameter	Condition	Typical value
V_s	supply voltage		3 V
I_s	supply current		4.58 mA
G_p	power gain	1 GHz	20.4 dB
NF	noise figure	1 GHz	2.2 dB
$PL_{(sat)}$	saturated load power	1 GHz	-3.4 dBm

5.7 Mobile applications break free with WiMAX MIMO

WiMAX 802.16e MIMO transceivers UXA234xx

High broadband mobile applications are quickly becoming a reality thanks to the benefits of smart antennae technologies, such as WiMAX 802.16e multiple input/multiple output (MIMO). By offering a complete family of compatible receiver/transmitters, including full dual Rx/Tx solutions, NXP helps you give consumers a richer mobile lifestyle with robust high-speed internet access and video streaming from their mobile equipment.

Features

- Fully integrated direct up transmitter and ZIF receiver architecture
- Dual Rx and Tx for MIMO operation
- Low noise, high dynamic range receiver with high linearity
- Fully integrated VCO with integrated supply voltage regulator
- Serial bus digital interface (4 wires)
- Supply voltage 2.7 V to 2.9 V
- Support for channel bandwidths from 3.5 MHz to 20 MHz

Benefits

- Extremely low noise figure
- Support for flexible calibration techniques ensures optimum performance and lowest power
- Field proven solution
- No external IF filter required
- Minimal external component requirement

Applications

- Smart phones
- Laptop PCs
- PDAs
- Games consoles
- PCI and PCIe cards

Our next generation UXA234xx WiMAX products enable high broadband mobile applications, by allowing you to add robust high-speed internet access and video streaming to mobile equipment. Developed in close cooperation with end customers and baseband companies, NXP Semiconductors' proven WiMAX solutions deliver best-in-class performance. They provide flexible interfacing to a variety of baseband devices and offer seamless handover from basestation to basestation.

Covering frequencies from 2.3 GHz to 3.8 GHz, these fully integrated, low-power, direct conversion transceivers easily allow total WiMAX system solutions to meet TTA, FCC and ETSI requirements. With dual receiver/transmitter configurations available they can also deliver better uplink performance and improve your total end-user system. In addition, low power requirements ensure longer battery life. Highly integrated, the UXA234xx family requires the minimum of extra external parts, significantly reducing overall component count. Their small 6 mm x 6 mm footprint gives further space and cost savings, while being housed in a low-profile (0.85 mm) package ensures they meet the needs of mobile manufacturers.

bra970

Typical application diagram using the UXA23476

	Frequency range (GHz)	Type	NF (dB)	Rx gain (max) (dB)	I _{cc} (mA) RX/TX	Tx gain range (dB)	Linear output power meeting spectrum mask (dBm)	Package size HVQFN48 (mm)

5.8 Boost RF performance and reduce system size

RF PIN diodes in leadless SOD882T

Deliver the maximum performance and functionality in the smallest space with our new RF PIN diodes in SOT882T. These unique products enhance the RF performance of your system while reducing its form factor and cutting your time to market.

Features

- Low series inductance
- Low capacitance
- Leadless, package with very small footprint (1.0 mm x 0.6 mm)
- Low profile (0.4 mm)
- Low insertion loss

Benefits

- Unrivalled performance
- Faster time to market
- Smaller end products
- Easier assembly

Applications

- Cellular and cordless phones
- Low noise blocks
- Multi-switch boxes
- Set-top boxes
- CATV infrastructure

- Base stations
- eMetering
- Bluetooth and wireless LAN
- Car Radio

Our RF PIN diodes are ideal for a wide range of mobile communications and RF applications. Their low loss and low distortion levels improve battery life and quality in mobile phones and cordless phones. Moreover, their extremely low forward resistance, diode capacitance and series inductance simplify design-in.

We offer an extensive portfolio of RF PIN diodes. So you're sure to find the right solution for your needs. The latest additions to this portfolio are housed in the ultra-small, leadless SOD882T package, making them particularly suitable for wireless devices.

As part of our ultra-thin leadless package (UTLP) platform, the SOD882T package uses a patent-pending etch process that produces extremely high silicon to footprint ratio and a profile as low as 0.4 mm. In addition, the package has no leads and so delivers very low parasitics for maximum RF performance. This unique combination of properties results in devices that maximize the performance and functionality of your system while reducing its size and weight. They also simplify board assembly to help cut your time to market.

Product overview

Type	Limits		Typ. RD (Ω) @			Typ. Cd (pF) @

Look at WiMAX, chapter 5.7

6. Packing and packaging information

6.1 Ultra thin leadless package platform

NXP ultra-thin leadless package (UTLP) platform for faster time-to-market, smaller form factor.

Features

- Low height (0.4 mm)
- Small footprint
- Very flexible platform
- High silicon-to-footprint ratio
- Increased performance
- Footprint compatible with JETA standard SC-101
- Very efficient packing (15k/7" reel)
- RoHs-compliant, green plastic.

Benefits

- Improved electrical, thermal and moisture resistance
- Reduced noise
- Easier board assembly
- More functionality in a smaller space
- Excellent RF performance.

The NXP ultra-thin leadless package (UTLP) uses a patent-pending etch process, enabling a lead frame with independent top and bottom layouts, giving maximum product creation flexibility. A very high silicon-to-footprint ratio, combined with a low profile of 0.4 mm makes the device perfectly suited for space constrained portable applications, like mobile communications, PDA's and handheld devices, increasing performance with same footprint.

The unique design improves the package's electrical and thermal performance, and at the same time increases the moisture resistance. The chosen technology enables the reduction of added package material to a minimum, to come as close to a bare die as possible, without the bare die drawbacks in assembly. The resulting very low parasitics give a much better performance than leaded packages or even QFN type, enabling a design-in range, which includes high-frequency applications operating at up to 24 GHz.

The product creation flexibility also supports packaging techniques like multiple dies, multiple leads with isolated die pads, re-routing and even fine pitch flip chip, which enhances RF performance even further. This enables more functionality in a smaller space. The result is a package, which increases customer's design flexibility, reduces time to market and improves performance in a broad range of (mobile) applications.

The package makes board assembly easier. The footprint is compatible with JETA standard SC-101 and because of the built-in standoff, both metal defined and solder resist defined PCB layouts can be used. To lessen the impact on the environment the package is already dark green and packed with as many as 15k units on a 7" reel.
